Featured DevOps Project

finalproject.networkyonathan.com - built so my sister could monitor remotely from anywhere after having a baby.

Built around Docker, Kubernetes, Terraform planning, Grafana-oriented observability planning, Cloudflare exposure, Git-based updates, and deployment verification.

Demonstrates production-style thinking: public service exposure, monitoring mindset, rollout checks, and end-to-end validation.

What I do best

Hybrid Cloud: Azure, Microsoft 365, Intune, Entra ID, conditional access, and support across mixed on-prem and cloud environments.

Security and Hardening: Microsoft Defender, endpoint protection, hardening, CrowdStrike, FortiAnalyzer, Cortex, and compliance-minded operations.

Infrastructure and DevOps: Windows, Linux, networking, DNS, DHCP, routing, Docker, Kubernetes, Terraform planning, monitoring, and deployment validation.

Professional Experience

System Administrator - Sinopia Integration

August 2025 - Present

- Full responsibility for IT systems and infrastructure across multiple client organizations, including live operational environments.
- Implemented Microsoft 365, Intune, and Defender solutions with a security-first approach.
- Managed backup and recovery using Acronis and Veeam.
- Worked with international-facing environments and supported infrastructure changes with business continuity in mind.
- Participated in a factory-wide network refresh involving new Meraki switches and improved monitoring visibility.
- Supported rollout activities around a Priority system implementation as part of a broader business systems transition.

IT Manager - CodeValue

December 2024 - August 2025

- Managed IT infrastructure for 200 users.
- Handled Azure DevOps and Entra ID management.
- Led Microsoft 365, Intune, and Defender implementations.
- Implemented XDR solutions and coordinated cross-team IT operations.

Senior IT Technician - Migdal Capital Markets

January 2022 - December 2024

- Administered and supported more than 200 users across Azure hybrid environments.
- Created, assigned, and managed customized security and compliance policies.

- Led organization-wide OS and software upgrades.
- Supported executive leadership, including C-level management.
- Managed EDR solutions, port configurations, and security monitoring systems.
- Conducted internal penetration testing and led remediation and hardening processes.
- Worked with communication and security platforms including NAC and firewalls.

Technical Skills

Azure, Microsoft 365, Intune, Entra ID, Defender, AWS, Git, Docker, Docker Compose, Kubernetes, Terraform, Grafana, Cloudflare, Linux, Bash, PowerShell, Python, Monitoring, Observability, Reverse Proxies, Deployment Validation, CI/CD Concepts, CrowdStrike, F5, Forti.

Education and Training

- Expert College - completed last week (DevOps / cloud / infrastructure coursework)
- Microsoft 102 / 104 administration and cloud fundamentals
- CCNA Networking and Cyber Security
- Pre-Academic Program, The Hebrew University
- IDF Ground Forces service; combat soldier and Krav Maga instructor

Independent Projects

- finalproject.networkyonathan.com - DevOps / monitoring project with Terraform, Grafana, Docker, Git, Cloudflare, Kubernetes, and deployment validation
- Built for my sister so she could monitor the system from anywhere after having a baby
- n8n workflows and SaaS integrations
- Gmail, OneDrive, webhook, and API integrations
- RAG-based system built with Supabase

In the past two years, I have served over 300 days in active military reserve duty.
